

EXPERIMENT 14

Create a program in python to check for agreement in sentences based on a context-free grammar's rules.

PROGRAM:

```
def check(sentence):  
    words = sentence.lower().split()  
  
    if len(words) < 2:  
        print("Invalid Sentence")  
        return  
  
    subject = words[0]  
    verb = words[1]  
  
    if subject in ["he", "she", "it"] and verb.endswith("s"):  
        print("Agreement Correct")  
  
    elif subject in ["i", "we", "you", "they"] and not verb.endswith("s"):  
        print("Agreement Correct")  
  
    else:  
        print("Agreement Incorrect")  
  
sentence = input("Enter sentence: ")  
check(sentence)
```

OUTPUT:

```
print( Agreement Correct )  
  
else:  
    print("Agreement Incorrect")  
  
sentence = input("Enter sentence: ")  
check(sentence)
```

```
... Enter sentence: he eats apples  
Agreement Correct
```
