

EXPERIMENT 22

Create a python program that performs reference resolution within a text

PROGRAM

```
text = input("Enter text: ")
words = text.split()
pronouns = ["he", "she", "it", "they", "him", "her", "them"]
print("\nPronouns Found:")

for word in words:
    if word.lower() in pronouns:
        print(word)
```

OUTPUT:

```
print("\nPronouns Found:")

for word in words:
    if word.lower() in pronouns:
        print(word)
```

... Enter text: Ravi bought a new laptop. He uses it every day.

Pronouns Found:
He
it
