

EXPERIMENT 23

Develop a python program that evaluates the coherence of a given text.

PROGRAM

```
from nltk.tokenize import sent_tokenize

import nltk

nltk.download('punkt')

text = input("Enter a paragraph: ")

sentences = sent_tokenize(text)

print("\nNumber of Sentences:", len(sentences))

if len(sentences) > 1:

    print("Text appears coherent.")

else:

    print("Text may not be coherent.")
```

OUTPUT:

```
print("\nNumber of Sentences:", len(sentences))

if len(sentences) > 1:
    print("Text appears coherent.")
else:
    print("Text may not be coherent.")
```

```
... [nltk_data] Downloading package punkt to /root/nltk_data...
[nltk_data] Package punkt is already up-to-date!
Enter a paragraph: Artificial Intelligence is transforming technology. It helps solve complex problems in healthcare and educa

Number of Sentences: 2
Text appears coherent.
```
